- Published in journals
- Easily exports data
- Touch screen option
- Useful for all ages & cultures
- Engages physically challenged people who cannot draw or use an instrument to write

Includes:

- Automatic Clock Drawing Test™
- Trail Making Test Part B™

Automated Operation

The American Medical Association and NHTSA recommend only two tests for evaluating the cognitive abilities of older drivers: The Clock Drawing Test and the Trail Making Test Part B.

SpecialtyAutomated™ introduces the first and only fully computerized Clock Drawing Test, one of the most widely used cognitive assessment tests, and the Computerized Trail Making Test Part B™, pioneered by the US Army. This set is designed to save driver's license departments significant time, labor, and expense to rapidly screen and monitor drivers for brain impairment and dementia. Instant scores, reports, and feedback are provided through this unique software application.

Automation of this test effectively reduces wait time and costs associated with manual administration, semi-computerization, and use of other cognitive tests. No other automated cognitive test offers a self-service option. No other visual attention assessment is as sensitive as the Automatic Clock Drawing Test™.

Automatic Clock Drawing Tests™ offer great potential for fitness-to-drive evaluations to reduce crashes and high-profiled tragedies involving dementia drivers. This tool ensures that drivers of all ages, cultures, and backgrounds will be screened and treated fairly and equally.

*Start screening and monitoring drivers now
using the Automated Driver's License Cognitive
Test Set, ACDT-DMV-07.*
