Benefits

- Completely computerized
- Very fast, sensitive, & objective
- Instant scores, reports, & feedback
- Multimedia & interactive
- User friendly & self-service option
- Many foreign languages
- Touch screen Sytotechnology™ option
- Standardized & paperless tests
- Useful for all ages & cultures
- Optimized for repeated administration
- Powerful office & field evaluations
- Ideal assistive technology for disabled veterans, inmates, & those with special needs
- Engages people who are unable to draw or write

Studies show that **nonverbal deficits** are associated with peer relationship difficulties, increased risks for psychosocial maladjustment, and poor academic skill performance.

Automated Testing

This is the first and only fully computerized battery of nonverbal intelligence tests. Instant scores and feedback are provided through an exclusively unique software application. Our **LÄZZÄR NONVERBAL INTELLIGENCE TEST™** is portable wherever there is a computer and a requirement to screen the cognitive abilities of large numbers of individuals, soldiers, and inmates.

This test effectively reduces wait time and costs associated with manual administration, semi-computerization, and the use of other cognitive tests.

The **LÄZZÄR NONVERBAL INTELLIGENCE TEST™ (LNIT)** Includes a battery of multimedia and interactive tests designed to measure visuoperceptual abilities, constructional skills, attention, executive function, and organization. The LNIT quantifies both abstract and concrete concepts and effectively removes language barriers and empowers individuals with speech and hearing impairments to assess intellectual function and aptitude.

No oral instruction, interaction, or pantomime is needed!

This automated battery of tests therefore eliminates bias associated with culture and economic status.

Automate your agency now.
