- English & foreign languages
- Easily exports data
- Standardized & paperless
- Touch screen option
- Usable in combat zone
- Developed in accordance with International Council of Ophthalmology standards
- Engages the physically challenged and examinees with special needs

Automated Operation

SpecialtyAutomated™ introduces the first and only rapid and fully automated Static Visual Acuity (SVA) Screening Test to provide instant scores and feedback through a unique software application. This enables military staff to dedicate valuable time to other tasks that would be vested in manual or semi-computerized vision test administration. All tests are developed in accordance with International Council of Ophthalmology standards.

Contrast sensitivity and SVA, combined, are recommended for a stronger measure of visual acuity. This screening test is a significant improvement over the Snellen Eye Charts of the 1860s and the vision testers of the 20th century.

Reduce wait times. Automate your office today.

Start improving safety now by rapidly screening the static visual acuity of your recruits and soldiers using the SVA-MIL-07 by SpecialtyAutomated™.

Screens

- Static visual acuity & Contrast sensitivity ("Fog Vision")
- Integrated distances for far, near, & intermediate acuity (left & right eyes, binocularity)
- Night static visual acuity
