The best & largest selection of vision, cognition, knowledge, & skills tests on the Internet and software.

No downloads. No heavy equipment. No hassles. Use your own computer. Simply click and connect.™

Automatic Trail Making Tests™ are now in the United States Department of Defense

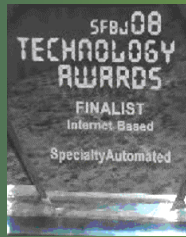

SpecialtyAutomated is pleased to announce that its Automatic Trail Making Tests™ are now being used for cognitive test applications by the US Department of Defense. The powerful software allows for automatic administration, scoring, and feedback. Automatic Trail Making Tests™ are computerized and state-of-the-art technological versions of the paper-based Trail Making Tests that were developed by the US Army War Department in 1944. Automatic Trail Making Tests™ are ideal for the clinician in an office, in the field, at the battlefield, and in remote or high security locations or covert operations where Internet access is unavailable. Automatic Trail Making Tests™ are standardized, rapid, and objective cognitive tests that eliminate the need to train individuals to administer, time, and score these popular tests. Importantly, Automatic Trail Making Tests™ are ideal assistive technologies that actively engage individuals with brain injuries and physical disabilities that prevent writing or drawing. SpecialtyAutomated is honored to improve the cognitive testing of US troops and to take the Trail Making Tests into the 21st century.

Two most powerful cognitive tests are available only at SpecialtyAutomated

The American Medical Association, a leading medical organization in the United States, and NHTSA, the National Highway Traffic Safety Administration, recommend only two tests to screen the cognitive abilities of older adult drivers: The Trail Making Test Part B and the Clock Drawing Test. However, these tests are limited to pencils and papers. SpecialtyAutomated is the only company that offers numerous online and software versions of these very powerful tests. The Automatic Trail Making Tests™ and the Automatic Clock Drawing Tests™ are the software versions of these tests. The Online Trail Making Tests™ and the Online Clock Drawing Tests™ are the Internet-based cognitive tests. These fully computerized, sensitive, rapid, and objective tests are capable of self-administration and offer instant scores and feedback. These SpecialtyAutomated tests can easily be automatically administered to hundreds, thousands, and millions of individuals without the need for paper, pencils, and trained administrators. The Automatic Trail Making Tests™, Online Trail Making Tests™, Automatic Clock Drawing Tests™, and Online Clock Drawing Tests™ are ideal for deployment in any clinic, driver's license test office, hospital, or government facility. In fact, studies show that the Automatic Clock Drawing Tests™ are so sensitive that potential cognitive deficits are identified in individuals failing at 10% or more.
